Reasons for Allowance

1. In response to amendment filed on 3 January 2006. Claims 1, 3-6, 8, 9, and 11-26 are pending. Claims 1, 8, 9, 11 are amended, claims 2, 7, and 10 were canceled. Amendment to the claims is accepted.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: Claims 1, 3-6, 8, 9, and 11-26 are allowed due to arguments presented beginning on page 8:

'Claim 12 recites a computer comprising a plurality of interconnected network devices including a disk drive that comprises an interface for receiving user access request to access a network device and transmitting device access data to the client computer ... Alonso does not disclose or suggest these limitations because the Alonso does not disclose a disk drive comprising an interface for receiving from a client computer a user ID and user access request'.

The cited art references do not teach, the following from claim 12 - a disk drive comprising: an interface for receiving from a client computer a user ID along with user access request, a disk controller, responsive to the user ID and user access request, for controlling access to the disk.

'Claim 1 has been amended to incorporate the limitation recited in claims 2, 7, and 10 ... The previous rejection against these claims are incorrect because DeTreville does not disclose manufacture of a disk drive. Second DeTreville discloses to manufacture a CPU with a pair of public and private keys 150 that are unique to the CPU (col. 5, lines 54-55). That is, the public and private keys are for accessing the CPU and not other devices connected to a network'. The cited references do not teach the following from claim 1 a disk drive comprising: an

interface for receiving from a client computer a user ID along with user access request,
a disk controller, responsive to the user ID and user access request, for controlling access
to the disk.

'Claim 22, recites a disk drive ... However, modifying Alonso in view of Jackson and DeTreville would result in an authentication server implementing network authentication facilities using a secrete device key and not a disk drive implementing network authentication facilities using a secrete device key'. In addition the following in claim 22 is not taught in any of the cited references: a disk drive comprising: an

interface for receiving from a client computer a user ID along with user access request,
a disk controller, responsive to the user ID and user access request, for controlling access
to the disk.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
